

Pint-Sized Powerhouse

The SaniDry Sedona eliminates damp, musty odors in your basement or crawl space by drying and filtering the air!

Mold and mildew are musty smelling fungi that thrive in moist conditions. Dust mite fecal matter is the #1 indoor allergen. The SaniDry Sedona will keep your home below 55% Relative Humidity – mold won't stand a chance and dust mites will die off!

HIGH PERFORMANCE

Whether a dehumidifier will keep up and ensure mold won't grow in all seasonal conditions depends on how much water it will take out of the air. This depends on capacity and air flow. The SaniDry Sedona has a whopping 100 pints per day capacity and will move over 300 cubic feet of dry air per minute around your basement or crawl space. This dries the building materials, and contents of your home, and makes that damp feeling go away!

HIGH EFFICIENCY

It is important and simple - it means how much water it will take out of the air for how much money in electricity it costs you to run it. The Sedona is not only Energy Star rated (most dehumidifiers are not even close), but it's the most efficient dehumidifier in the world without a large bulky heat exchange core - at over 2.9 liters of water per kilowatt hour of electricity. **This means you'll save on electricity over the years while keeping your home dry and healthy.**

**WORLD'S MOST
POWERFUL
DEHUMIDIFIER
FOR ITS SIZE!**

What's Downstairs... is Upstairs!

The basement or crawl space is part of the inside of a house as a whole. If there is high humidity and musty odors downstairs, it will affect the upstairs environment. Therefore, by drying your basement or crawl space, the SaniDry Sedona will help make your whole home drier and healthier!

- 1 Drains automatically - no buckets to empty.
- 2 Small size fits in crawl spaces and takes up minimal space in basements.
- 3 Energy Star rated. Water (colored for visibility) removed by standard household dehumidifier vs. SaniDry Sedona for same electricity cost.
- 4 Fully ductable so it does not have to be located in the space you are drying.
- 5 Elegant high performance design, inside and out!
- 6 Simple automatic controls. Set it and forget it!
- 7 Convenient handles and light weight make Sedona easy to move around. Cabinet is not spray painted but powder coated for scratch resistance.
- 8 “Duet” filter removes mold spores, dust mite droppings, dust and other particulates from your air with large MERV 8 filter with carbon for odor reduction.
