

TripleSafe® Sump System

THE WORLD'S MOST RELIABLE PUMPING SYSTEM

The **TripleSafe®** is the world's most reliable pumping system; keeping your basement dry with triple the protection.

A sump pump is a necessary element of a basement waterproofing system — and everything is fine until one of three problems occur, causing a flood. The three pump problems are: pump failure, single pump can't handle volume in hard rain, and power failure. The **TripleSafe®** assures protection from all three problems.

SCENARIOS

If Pump 1 fails:

Pump 2 takes over

If Pump 1 can't keep up:

Both Pumps 1 and 2 operate - a total of 6200 gallons per hour

If Power / Circuit Breaker fails:

Pump 3, a battery-operated 'UltraSump,' takes over

System

TEM

PUMP 1
Zoeller M-53 1/3 hp Pump

- Does the pumping most of the time
- Reliable, efficient, smooth-running 1/3 hp cast iron pump

PUMP 2
Zoeller M-98 1/2 hp High Volume Pump

- Operates when either Pump 1 fails, or if Pump 1 cannot keep up with the heavy flow of water
- When pumps work together, they can remove up to 6200 gallons of water per hour out of your basement
- Larger pump, giving that “turbo boost” when you need it

PUMP 3
UltraSump® Battery Back-up Pumping System

- DC Operated Pump
- If power fails, the UltraSump turns on, operating via battery power to remove water
- Battery and automatic charging system are included

SPECIAL FEATURES

Unique ‘Figure Eight’ design allows 3 sump pumps to fit perfectly in the TripleSafe™ liner.

Equipped with an airtight floor drain in case of a plumbing leak. A floating ball in the drain creates the seal.

The patented WaterWatch® Alarm sounds off if the water rises above the operating range of the pumps. This warns you there is a problem before damage occurs.

Removable lids for easy inspection/service.

3 PumpStands fit in the bottom - ensuring silt and sediment don't block the flow to the water inlet on the bottom of the pumps.

Knockout in the lid allows dehumidifier to drain directly into the TripleSafe™.
