

Permanently Stabilize Your Foundation

PN #MBHPH

FSI HELICAL PIER SYSTEM

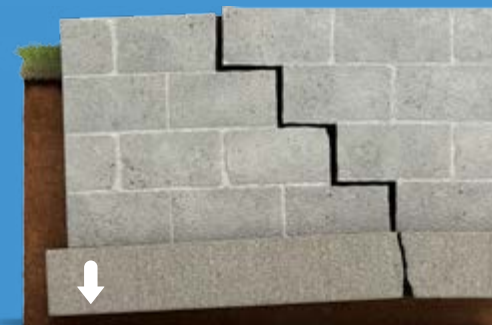

Happy Homes Demand Real Support.

YOUR HOME IS PRECIOUS. It's where you grow your family, welcome friends, and create lasting memories. Nothing should stand in the way of that. As structural damage begins to occur due to settlement, the very foundation from which your life is built becomes compromised. Finding a permanent solution that addresses the true cause of your foundation problem is the surest way for you to get on with your life's happenings and enjoy peace of mind.

How did your foundation get this way?

After a home is constructed, changes in the surrounding soil are the primary cause of foundation settlement. Extreme moisture changes, such as drought conditions or oversaturation, along with poorly compacted fill soils, create soil movement. That movement shifts and settles your home, causing cracked walls, uneven floors and a sinking foundation.

The Proven Solution

THE PATENTED HELICAL PIER SYSTEM exclusively from Foundation Supportworks, Inc. permanently stabilizes your home's foundation and in many cases can lift your home back to level. Steel piers are mechanically "screwed" into the soil using small construction equipment. The piers are installed to appropriate depths and capacities, and a steel foundation bracket is connected to the helical piers and attached to your foundation's footing.

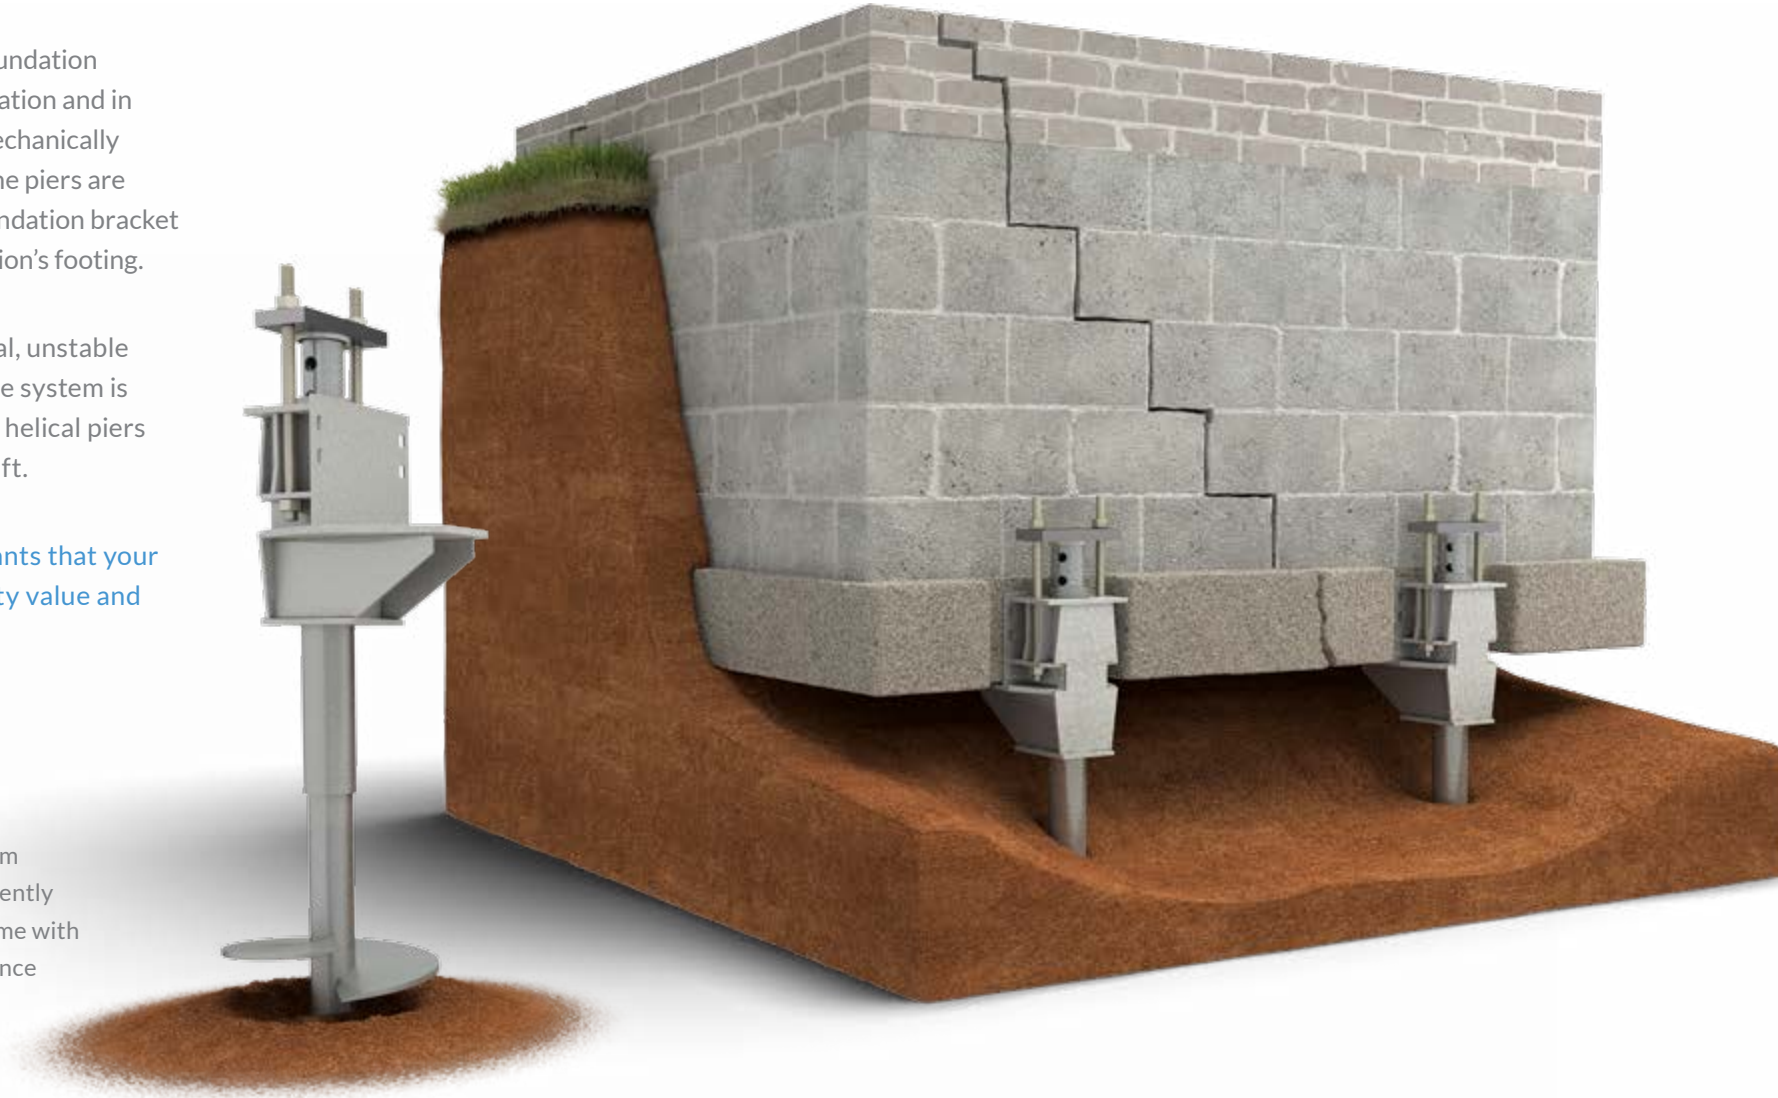

The weight of your home is then transferred from the original, unstable soils, through the piers, to the competent soil or bedrock. The system is uniquely designed to potentially lift your home, making FSI's helical piers the best solution for complete foundation stabilization and lift.

FSI Helical Pier Systems are installed year-round and warrants that your foundation will not settle any further. Restore your property value and enjoy peace of mind right away.

Our Promise, Your Property

Rest assured that the Foundation Supportworks Helical Pier System will immediately stabilize your settling foundation and will permanently protect your home against any further movement. Helical piers come with a 25-year warranty against manufacturing defects and a performance warranty from your local dealer.

ADVANTAGES

Round shaft has high resistance to bending

Suitable for both heavy and light loads

Galvanized system will not rust

Below grade solution concealed from sight

Can often lift foundation back toward level position

INSTALLATION

1

Footing is exposed and prepared for bracket

2

Helical piers are advanced and bracket is attached to the footing

3

Weight of home is transferred through the piers to competent soils

4

Home is lifted back to level position, if possible
